

## **Berendsen Fluid Power Releases Eaton's Jining Motor Range**

Berendsen Fluid Power is pleased to announce the release of Eaton's Jining Hydraulic Motors, a range of low speed, high torque hydraulic motors.

Primarily suited for use in both agricultural and construction equipment, the Jining range includes the JH Series, JS Series and 2K Series motors, along with a range of genuine spare parts. All Gerotor/Geroler motors in the range are metric builds, featuring either spool or disc valves.

Priced at the lower end of the market, the Jining range has the following features -

- Compact in design.
- High pressure capacity shaft seal.
- Direction of shaft rotation and speed can be controlled easily and smoothly.
- Best combination of efficiency and economy in medium duty applications.

The competitive pricing, combined with the above features will see the Jining motors become a popular motor selection at the price sensitive end of the hydraulic motor market. The Jining Motor range adds to and compliments, Berendsen's existing range of Char-Lynn motors.

Jining is a wholly owned business of Eaton Hydraulics that has been in operation since 1994, producing hydraulic motors for the South East Asian Market.

Berendsen Fluid Power is Australia's largest independently owned hydraulics company and is proud to offer Australia's most comprehensive range of fluid power products, service & repair facilities and system solutions. Berendsen has extensive experience and ongoing involvement in fluid power applications across a wide range of industries, including Mining, Agricultural, Marine, Transport, Construction and Manufacturing.
