What do we offer?

Berendsen Fluid Power Perth manufacture and service lubrication units for fixed plant applications including ball mills, jaw crushers, cone mills, SAG mills, rotary filters, calcinators and thickeners. We custom design and manufacture lubrication units to your specifications, offer rapid turnaround from concept to completion and complement this with exceptional technical advice and aftermarket support.

✓ EXCEPTIONAL QUALITY

At Berendsen we take pride in delivering exceptional quality workmanship on all of our manufactured products. Our lubrication units are manufactured in accordance with stringent quality standards. Every unit is assessed in our testing facilities according to design specifications and a test certificate is issued with each build, affording you the peace of mind that comes with knowing that your new lubrication unit has passed Berendsen's strictest quality standards.

✓ RAPID TURNAROUND

At Berendsen Fluid Power we endeavour to deliver in the shortest production lead times possible. We have leading brand equipment stocked and perform testing and painting in-house to expedite production. We are committed to delivering to customer deadlines and believe that the combination of our extensive experience, highly skilled technicians, advanced machining capabilities and passion for customer service enables us to deliver exceptional quality products in fast turn-around times.

✓ LOCAL MANUFACTURING

All Berendsen lubrication units are manufactured in our Perth manufacturing facility. Our workshop is equipped with world-class in-house machining and fabrication facilities, hose and pipe manufacturing facilities, and comprehensive testing facilities. We welcome customer milestone reviews during the entire build process and use only locally available, high quality components from leading hydraulic brands.

✓ LOCAL SUPPORT

You will receive immediate service whatever your requirement. Many spare parts are stocked at the branch for your convenience. We provide in-house engineering support and have highly skilled technicians that perform hydraulic field service. We also offer a local call-out service to provide our customers with local high quality aftermarket support.

✓ SERVICING

Berendsen also conduct testing and diagnostics, overhauls, servicing, maintenance and shutdown servicing of lubrication units. Berendsen Perth is on call 24/7 for after-hours service support and our field service vans are equipped with the tools and critical spares needed to rectify common problems, onsite, in the quickest timeframe possible. When it comes to diagnosing problems in complex hydraulic systems, experience is critical, and this is what sets Berendsen apart from the rest. Through hard earned experience, Berendsen technicians have acquired the skills necessary to troubleshoot intricate hydraulic and pneumatic systems, devise solutions and get your machinery running.
