What do we offer?

✓ PUMP STRIPPING AND ASSESSMENT

Our process begins with a detailed assessment of your pump's condition, including stripping the pump according to the manufacturer's disassembly instructions and documenting the condition of each individual component on the pump to identify any wear, scoring, scratches and burrs on mating and moving parts. This enables our experienced technicians to identify the root cause of the pump failure.

✓ PRECISION REPAIRS

When your plant pumps and mobile pumps are overhauled by Berendsen you can be assured of a precision repair first time, every time.

Accurate diagnosis of component failure and appropriate repair is only achieved through years of experience, as well as knowledge and access to manufacturer specifications. Consequently, a Berendsen repair on your pump follows strict work procedures and stringently adheres to the manufacturer specifications for strip, disassembly, assembly and testing to ensure each component is returned to maximum life and efficiency.

✓ ASSEMBLY, PAINT AND TESTING

Once the necessary repairs have been carried out, pump reassembly is guided by Berendsen's strictly documented assembly procedures and the manufacturer's guidelines which ensures a consistent, high quality result.

To ensure quality and reliability, the performance of every repaired pump is assessed in our testing facilities. All of our sites are equipped with a variety of testing equipment ranging from basic pressure test rigs, to advanced electronic test equipment, custom built to cater for special applications. Test certificates are issued for every component tested, affording you the peace of mind that comes with knowing that your equipment has passed Berendsen's strictest performance and quality standards.

If required, your pump can be freshly painted by one of our four spray booths or where specialised coatings are required, by our preferred coating service providers.

✓ EXCEPTIONAL QUALITY

At Berendsen we take pride in delivering exceptional quality workmanship on all repair and service work. Our skilled teams have years of experience not only repairing pumps, but diagnosing underlying problems, which are often the result of prior inadequate maintenance or servicing.

All Berendsen repairs are conducted in accordance with stringent quality standards to ensure your equipment's optimal efficiency and absolute safety. We are ISO9001:2000 certified and provide a comprehensive warranty on all our repairs.

✓ FAST TURNAROUND

Every hour that your pump is out of action is costing you money! At Berendsen we understand how critical it is to reduce equipment downtime and prevent costly shutdowns, so we work fast to get your pumps repaired on time, every time.
